To Whom it May Concern:

We worked with Systems West recently on our last 7,000 sq. ft expansion to our manufacturing plant. We are completely satisfied with their performance and it is without any reservation that I give a high recommendation to Systems West.

Over the years we have worked with many different contractors on our building and expansion needs. It is refreshing to work with a contractor like Systems West who delivers on their promises with no surprises, no change orders and no cost overruns. The construction services were provided in a very professional manner and everything was completed on time and within our budget.

Systems West was always happy to answer any questions we had when it came to the build, building permits, sub-contractors, etc. It was a pleasure working with their team, and will be our first call for any future expansions or new construction.

If you have any further questions about our experiences building with Systems West please feel free to contact me direct.

Respectfully,
